

KARRI SUNIL REDDY

Solana Developer | Rust | Anchor | DeFi

Bargarh, Odisha, India | +91 6370807112 | sunday7637@gmail.com

[GitHub](#) | [LinkedIn](#) | [X / Twitter](#) | [Portfolio](#)

SUMMARY

Solana developer focused on Rust, Anchor, and DeFi protocols. Built and deployed on-chain applications including an AMM, prediction market, P2P atomic swap protocol, and a Solana token-launch platform, working with PDAs, CPIs, SPL tokens, ATAs, and Anchor account validation. Currently expanding into async Rust, backend systems, and DEX / on-chain trading infrastructure.

EXPERIENCE

Web3 Research Intern — DYOR Research

Remote

- Researched and analyzed Web3 protocols, DeFi ecosystems, and crypto markets, building practical understanding of blockchain infrastructure and protocol design.

Solana Developer Fellow — Solana School / 100xDevs

2026

- Selected for a structured, hands-on Solana builder program focused on Rust, Anchor, and on-chain application development.
- Built practical Solana projects while deepening knowledge of programs, PDAs, CPIs, and token standards.

Full-Stack & Blockchain Developer (Freelance) — Self-directed

May 2024 – Present

- Built and deployed prototype smart contracts and Web3 applications alongside full-stack web apps using React, Next.js, and Node.js.
- Developed end-to-end interfaces integrating wallet connectivity and blockchain transactions.

TECHNICAL SKILLS

Languages: Rust, TypeScript, JavaScript, C++, Solidity

Solana: Anchor, PDAs, CPIs, SPL Tokens, Token Accounts / ATAs, Token-2022, Web3.js, Wallet Adapter

DeFi: AMMs, Liquidity Pools, Token Swaps, P2P Atomic Swaps, Escrow, Prediction Markets

Web: Next.js, React, Node.js, Tailwind CSS

Infrastructure: Git, Docker, PostgreSQL, Prisma, Linux / WSL

Ecosystem: Raydium SDK v2, Metaplex, Helius, IPFS / Pinata

PROJECTS

Solana AMM | Rust, Anchor, Next.js | [amm-three.vercel.app](#)

- Built and deployed an automated market maker implementing liquidity pools, token vaults, and swap logic in Rust and Anchor.
- Implemented on-chain pool state, swap calculations, and Anchor account validation, integrated with a Next.js frontend.

Sol Swap — P2P Atomic Swap Protocol | Rust, Anchor, TypeScript | [GitHub](#)

- Built a trustless atomic-swap protocol for SPL token pairs with no liquidity pool, using PDA-based non-custodial escrow vaults and CPI token transfers.
- Implemented trade completion and refunds, and automated WSOL wrapping/unwrapping and ATA handling in the transaction flow.

Prediction Market DApp | Rust, Anchor, Next.js | [prediction-market-solana.vercel.app](#)

- Built and deployed a decentralized prediction market with creator-controlled resolution and winner payout flows.
- Designed PDA-based on-chain state for markets and user positions and implemented Anchor instruction validation.

Sun Launcher — Token Creation & Minting Platform | Next.js, Solana Web3.js, Token-2022, Raydium SDK v2 | [sun-launcher.vercel.app](#)

- Built and deployed a no-code Solana token creation platform with Token-2022 minting, metadata handling, and an IPFS/Pinata upload pipeline (Devnet).
- Integrated Raydium SDK v2 for CPMM liquidity-pool creation and Helius RPC, with wallet-connected transaction flows.

Higher — On-Chain King of the Hill | Rust, Anchor, Next.js (Devnet)

- Built an on-chain bidding game with Anchor instructions and PDA-based state for trustless, program-controlled pot distribution.

EDUCATION

MCA — Gangadhar Meher University, Sambalpur, Odisha

2024 – 2026

BCA — Vikash School of Business & Management

2024
